

Sketch Up

for Woodworking

Before the first class meets, please obtain an account with Trimble Software and navigate to [Free 3D modeling Software| 3D Design Online| SketchUp Free Subscription](#) and then create a user account. Review and complete the tutorial video, *Getting Started with SketchUp Free-Lesson 1*, and create a SketchUp Project for practice.

SketchUp will be used on school laptops during class, and homework will need to be completed on personal computers at home.

Some work will be done in the carpentry shop, so please arrive with: closed toe shoes, safety glasses, hearing protection, np95 mask, pair of light working gloves, pencil, and a white eraser.

Things to note: You will need to tie longer hair back and avoid loose or dangly jewelry while using the machinery.

Welcome to SketchUp for Woodworking! ~ Ralph Fink
